

5

WHAT IS CLAIMED IS:

1. A server/client system for processing data, the system comprising:

a network comprising:

10

a web server having information accessible remotely;

a client device having a rendering device to indicate fields to be entered, the client device configured to record input data associated with each of the fields upon an indication by the user of which field subsequent input is intended for, and wherein the client device is adapted to send the input data to a remote location; and

15

a recognition server configured to receive the input data and return data indicative of what was recognized to at least one of the client and the web server.

20

25

2. The system of claim 1 wherein the information received from the web server and provided to the client device is a markup language.

3. The system of claim 2 wherein the markup language received by the client device comprises one or several markup portions and one or several script portions.

30

4. The system of claim 3 wherein the markup language includes an indication associating a grammar with a field.

35

5. The system of claim 4 wherein the recognition server receives the input data and the indication of the grammar.

5

6. The system of claim 5 wherein the grammar is stored on the client device and transferred to the recognition server with the input data.

10

7. The system of claim 5 wherein the grammar is stored on the recognition server and wherein the indication of the grammar includes a reference to the grammar for the recognition server.

15

8. The system of claim 3 wherein the markup language comprises one of HTML, XHTML, cHTML, XML and WML.

20  
25

9. The system of claim 1 wherein the client is adapted to normalize the input data prior to sending the input data to the remote server.

10. The system of claim 2 wherein the web server includes a server side plug-in module for dynamically generating a markup language page for the client device.

11. The system of claim 10 wherein the markup language comprises one of HTML, XHTML, cHTML, XML and WML.

30

12. The system of claim 1 and further comprising a second client device having a microphone and a speaker, the second client device configured to record speech data associated with each of a set of fields in response to prompts given to the user, and wherein the second client device is adapted to send the speech data to the recognition server.

35

13. The system of claim 12 wherein the second client device

5 comprises a telephone and a voice browser capable of  
rendering the contents from the web server.

14. The system of claim 13 wherein the information received from  
the web server and provided to each of the client devices is a  
10 markup language.

15. The system of claim 14 wherein the markup language received  
by the client devices comprises one or several markup portions and  
one or several script portions.

15 16. The system of claim 15 wherein the markup language includes  
an indication associating a grammar with a field, the indication  
having the same form from each of the client devices.

20 17. The system of claim 16 wherein the recognition server  
receives the input data and the indication of the grammar.

18. The system of claim 17 wherein the grammar is stored on the  
client device and transferred to the recognition server with the  
25 input data.

19. The system of claim 17 wherein the grammar is stored on the  
recognition server and wherein the indication of the grammar  
includes a reference to the grammar for the recognition server.

30 20. The system of claim 12 wherein each of the clients is adapted  
to normalize the input data prior to sending the input data to the  
remote server.

35 21. The system of claim 12 wherein the web server includes a

5 server side plug-in module for dynamically generating markup language for each of the client devices.

22. The system of claim 21 wherein the server side plug-in module dynamically generates markup language as a function of the type of  
10 client device.

23. The system of claim 22 wherein the server side plug-in module detects the type of client device.

15 24. The system of claim 21 wherein the web server includes a plurality of dialog modules accessible by the server side plug-in module, each dialog module pertaining to obtaining data using speech recognition, the server side plug-in module generating the markup language as a function a dialog module.

25. The system of claim 1 wherein the web server and the recognition server are located on a single machine.

26. A server/client system for processing data, the system  
25 comprising:

a network comprising:

a web server having information accessible remotely;

a client device having a microphone and a rendering component, the client device configured to obtain  
30 the information from the web server, the information having corresponding fields, the client device further configured to record input data associated with each of the fields, and wherein the client device is adapted to send the input data to  
35 a remote location with an indication of a grammar

5           to use for input recognition; and  
a recognition server configured to receive the input  
data and the indication of the grammar, the  
recognition server returning data indicative of  
what was inputted to at at least one of the client  
10       and the web server.

27. The system of claim 26 wherein the information received from  
the web server and provided to the client device is a markup  
language.

15 28. The system of claim 27 wherein the markup language comprises  
one of HTML, XHTML, cHTML, XML and WML.

29. The system of claim 26 wherein the grammar is stored on the  
client device and transferred to the recognition server with the  
input data.  
20

30. The system of claim 26 wherein the grammar is stored on the  
recognition server and wherein the indication of the grammar  
includes a reference to the grammar for the recognition server.  
25

31. The system of claim 26 and wherein the client device  
comprises a telephone and the rendering component comprises a  
speaker.

30 32. The system of claim 26 wherein the rendering component  
comprises a display showing the fields.

33. The system of claim 26 wherein the client and the recognition  
server are located on a single machine.  
35

5

34. A method for processing voice recognition in a client/server system comprising:

10

transmitting from a web server to a client device a markup language page having extensions configured to obtain input data from a user of the client device;

rendering the markup language page on the client device;

obtaining input data as a function of input from the user;

transmitting the input data and an indication of an associated grammar to a recognition server remote from the client device; and

15

receiving a recognition result from the recognition server indicative of what was inputted at at least one of the client device and web server.

20

35. The method of claim 34 wherein rendering the markup language includes displaying fields for data entry, and wherein obtaining input data includes receiving an indication from the user as to which field subsequent input is associated with.

25

36. The method of claim 34 wherein rendering the markup language includes audibly prompting the user.

37. The method of claim 34 wherein the markup language comprises one of HTML, XHTML, cHTML, XML and WML.

30

38. The method of claim 34 wherein transmitting the indication of the grammar comprises transmitting the grammar.

39. The method of claim 34 wherein transmitting the indication of the grammar comprises transmitting a reference to the recognition server as to where the grammar is located.
